Sudden loss of the heartbeat (stillbirth) is one of the most devastating things that can happen to a family. We know that many babies that pass away in utero have problems with the blood flow in their placenta. We also know that when babies can choose where their blood flows (to the brain and other essential organs). We have developed a new way to evaluate normal 3D ultrasound volumes and want to see if we can predict b 4540 reW\*nBTF10.2(\*)(9T000083)
